A small utility for ffmpeg that encodes an input video to a preset H264 profile and adds an mpeg4-style option for the output. This tool only encodes the video, not the audio or the subtitles (if any), so the output is a single video. It is pretty basic and simply allows you to encode to H264 using the preset profiles available and adding an mpeg4-style option to the output. A better way to do this would be using mpeg2.mov. We actually have already done that at work, which is why it was

removed from the tool. There are a couple of limitations to keep in mind: * No audio is encoded/encoded. * No subtitles/are encoded/encoded. * No background color correction is done. * No 4:3 cropped output is generated. * 5.1 audio is not supported. * It is not safe to use in production environments. * The output video is not super-fast. Usage: $ x264 video.mov -profile baseline -profile main -profile extended -qp 0 -crf 24 -vf "movie=video.mov, mpeg4" The mpeg4 option adds a newline at the end of the output, which is why it is not a valid mpeg4-style output. As a side note, you might want to verify the video.mov using avprobe.
